

Applying Admix Expertise to Frozen Pizza Sauce Production

Are you looking for improved yields on your tomato paste?

- Cutting your tomato paste with the Admix Rotosolver in-tank mixer produces an incredibly uniform mix normally within 2-minutes or less after all additions.
- When combined with the latest in-line brix meters, rapid, automated incredible accuracy is achievable so that you consistently hit your targeted Solids level without going excessively over.
- Our customers are also telling us that by utilizing Rotosolver they are finding that they are getting better dispersions and hydrations of their starches and are actually reducing their starch amounts in many cases.

Are Paste Commodity prices hurting your bottom line?

- Many of our customers are finding that they can buy a courser paste (at lower cost) and utilize the superior milling capabilities of our Boston Shear Pump to reduce the fiber size to the desired level of finer pastes.

Do you need your sauce to have lower Bostwick / higher viscosity?

- When utilizing the Boston Shearpump on Sauce at the correct mill settings, we can usually reduce sauce Bostwick by 18-30%. This allows for a much better final product and allows your formulators to be very creative relative to possible reduction in paste use. If finer texture is not desirable, this milled sauce can be utilized at 75% and 25% of standard course paste can be added back in for texture still reducing Bostwick by 12-20%!

Are your sauce blends really uniform in your hold and applicator tanks?

- Your sauce is only good if it remains consistent right up to application. Admix's complete line of sanitary agitators, Rotomaxx and unmatched application expertise can have any vessel performing at it's best in no time.

For your no-cost, no-obligation process audit by an Admix factory trained representative, please contact us today at 800-466-2369.
