

# Optifeed™ & Optifeed VPI™

## *Ergonomic Powder Induction Technology*

**A fully integrated, inline powder induction system utilizing either venturi or vacuum technology for rapid introduction and wetting of powders**

- Powder induction capacities up to 200 lbs/min and 25% maximum solids
- Venturi version is ideal for light brines and marinades for poultry processors using phosphates, sugars, spices and salt. Vacuum pump version suitable for heavier marinades using soy, starches, carrageenan and other hydrating ingredients.
- Standard system includes a 3.5 cubic foot powder hopper and modular frame at floor level for easy access to load ingredients
- Integrated sanitary clamps, valves and piping
- 316SS construction with CIP capability
- Optional NEMA 4X controls for pump
- Pre-engineered models for quick shipment

# PIC™ System

## *Ergonomic Rapid Powder Incorporation for High % Solids and High Feed Rates*

**An integrated, skid mounted powder induction system for conveying difficult powders into batch processing tanks and vessels**

- Standard system includes a powder hopper, work table, sanitary powder suction pump, powder valve, vacuum gauge, vacuum regulator valve, control box for pump and interconnecting piping
- All 304/316SS construction with CIP capability
- Powder feed capacity up to 200 lbs/ min depending upon powder characteristics
- Viscosity capability of 2500 cps and higher, maximum % solids of 78%
- Optional wand attachment also available
