

Rotosolver® Mixer Trial Skid

With Explosion Proof Motor for Chemical Applications

Try the Rotosolver® High Shear Industrial Mixer at your Plant

The Admix Rotosolver is the industry's leading high shear batch mixer for quickly and effectively wetting out and dispersing powders for chemical processors.

2-Week Rotosolver Trial for your Chemical Mixing Applications

A Trial gives you the opportunity to try the Rotosolver using your own materials and with your own operators / R&D team running the equipment. During the Trial, we encourage you to compare it to your current mixer, noting how the Rotosolver performs in terms of overall mixing time, flow, energy reliance, and efficiency with your current processes. We are confident you'll find that it outperforms in critical categories and provides:

- An optimal balance between shear and flow
- Excellent product flow patterns and turnover in the tank
- Greatly reduced mixing times
- Lower heat input
- Lower power consumption
- Superior mixing and dispersing
- 100% dissolving, hydrating, and suspension
- Single shaft, obstruction-free design
- One piece, clean-in-place (CIP) mixing head
- All stainless mixing head, shaft, drive, and motor available
- Optional secondary foils
- 100% scalability

Pictured without the removeable front access panels.

Everything You Need to Start Your Trial:

The Rotosolver trial mixer is fully enclosed on a "Skid" with removeable front panels for easy access to the mixer, tank, and electrical panel, etc. Fork-lift pockets are mounted at the bottom of the skid for transporting it around your plant. The skid contains:

- Rotosolver high shear mixer, model 132RS88-SS, 15HP explosion proof motor
- 100-gallon stainless steel tank (not jacketed) with a bottom discharge valve
- Industrial VFD Controller, Class 1 Division 1, enclosure ready to be wired to your electrical source
- Analog AMP and Hz Readouts
- Operating Instructions and Equipment Manual
